PROOF OF EXCELLENCE

One of my designed miniature robot, which I named the "AstroAnt", has been sent to the Moon in Feb 2025 in the IM-2 Lunar south pole mission. My PhD research is about miniature robotic and wireless sensor networks for future planetary in-situ exploration.

EDUCATION

Massachusetts Institute of Technology

Ph.D. in Media Arts and Sciences

September 2021 — May 2026 (expected)

Responsive Environments Group, MIT Media Lab

Massachusetts Institute of Technology

M.S. in Media Arts and Sciences

September 2019 — Aug 2021

Responsive Environments Group, MIT Media Lab

Beijing Institute of Technology

M.S. in Information and Communication Engineering

September 2015 — Apr 2018

Beijing Institute of Technology

B.S. in Information Engineering

September 2011 — Jun 2015

WORK EXPERIENCE

Engineer (supervisor: Prof. Samuel C.C. Ting (1976 Nobel laureate in physics))

CERN (the European Organization for Nuclear Research)

Apr 2018 — Apr 2019

- Designed the ground test monitor and control software for the UTTPS (Upgraded Tracker Thermal Pump System) of the AMS-02 (Alpha Magnetic Spectrometer, a high-energy particle Spectrometer operating on the International Space Station).
- The UTTPS has been installed to the AMS-02 by the end of Jan 2020 through four spacewalks.

ACADEMIC RESEARCH EXPERIENCE

AstroAnt - my designed robot is on the Moon!

MIT Media Lab

Jan 2021 — Mar 2023

- Lead engineer of the MIT Media Lab AstroAnt Lunar mission.
- Developed a miniature robot (the "AstroAnt") to work on the top panel of the Lunar rover MAPP-1 (developed by the Lunar Outpost) to collect thermal data.
- Finished four parabolic flights, a total of 120 parabolas.
- Finished all space-grade tests for the AstroAnt, and achieved the TRL (Technology Readiness Levels) 8 level.
- The AstroAnt has been sent to the Lunar South Pole in the IM-2 mission (Intuitive Machines-2) in March 2025.

HexSense

MIT Media Lab

May 2023 — Present

- Developed the "HexSense", which is a miniature wireless sensor node that can be ballistically deployed from rovers/landers or dropped from a fly-by satellite to the Lunar surface. After deployment, the HexSense can automatically stand up right and start collecting scientific data.
- Finished all the system function tests in a lab environment and achieved the TRL 4 level.
- Finished a 10-day field expedition in Svalbard in July 2023. One HexSense was deployed to collect local environmental data.

- Finished a 7-day field expedition in the lava tubes on the Canary Island in Feb 2024. Two HexSense were deployed to study the shielding protection of the lava tubes.
- Finished one parabolic flight in May 2024 and proved self-orientation capability in Lunar gravity.

Lunar Tumbleweed

May 2025 — Present

MIT Media Lab

- The Lunar Tumbleweed is a movable wireless sensor node that is designed to work on the Moon.
- The Lunar Tumbleweed can realize electrical power-free mobility on the lunar surface through the sun irradiance and custom-designed actuators driven by custom-made shape memory alloy spring.

LunarWSN (Master thesis at MIT)

Nov 2020 — Aug 2021

MIT Media Lab

- Developed a miniature cubic wireless sensor node, that we named "LunarWSN", that can be ballistically deployed from rovers/landers or dropped from a fly-by satellite to the Lunar surface.
- The LunarWSN node is designed for In-Situ lunar water ice detection.
- Finished all the system function tests in a lab environment and achieved the TRL 4 level.

LunarDeltaT

Feb 2023 — Jun 2023

MIT Media Lab

- Developed an approach to harvest energy through temperature gradient across the surface of the HexSense when it's working on the Moon.
- Finished all tests in a lab environment. LunarDeltaT shows an advantage over solar cells in a dusty environment (e.g., the lunar surface).

CircuitScout (side project)

Jun 2023 — Oct 2023

MIT Media Lab

- Designed a bench-top machine tool to streamline the in-circuit debugging.
- With the help of the PCBPT, when debugging PCB, all the users need to do are selecting signals and checking the output without the need to do anything else.

IO-Touch (side project)

Oct 2023 — Nov 2023

MIT Media Lab

- A pure software approach that can turn almost every GPIO into a capacitive sensor.

Mind Cube (side project)

Jul 2024 — Aug 2024

MIT Media Lab

- Designed a miniature (3 cm x 3 cm x 3 cm) fidget cube toy that can collect data from all the sensors when it is played in a hand. The data collected can be used to study one's real-time emotion. The Mind Cube can also be used as a music/game controller.

TECHNICAL SKILLS

- **Electronics** - Embedded system (nRF52, STM32, Atmel ATSAMD, Atmel AVR, ESP32), FPGA (Xilinx 7 series), analog circuit
- **Programming languages and related** - C, C++, VHDL, Python, JavaScript, Git, LabVIEW, Arduino
- **Computer-aided design/engineering** - Altium Designer, KiCAD, EasyEDA, Mentor Graphics PADS, SolidWorks, Fusion 360, Inventor, Onshape.
- **Manufacturing skills** - 3D modeling/printing (FDM, SLA, SLS), Molding & Casting, CNC machining, PCB milling, PCB soldering, Laser cutting, water jet cutting.
- **Space grade tests** - thermal vacuum test.
- **Others** - Parabolic flight certificates !!! :]

AWARDS

- **Amazon Robotics PhD communication competition (3rd place)** (2025)
- **The Create the Future Design Contest category winner (Robotics and Automation)** (2024-2025 academic year)
- **Harold Horowitz (1951) Student Research Fund award** (2023-2024 academic year)
- **Angela Leong Fund Fellowship** (2022-2023 academic year) - 1 student/year in MIT
- **Intel Cup Undergraduate Electronic Design Contest - Embedded System Design Invitation Contest** (2014) - Second prize
- **China National Scholarship** (2011) - Top 0.2%

TEACHINGS AND ACTIVITIES

- **Teaching Assistant** (2024 Fall) - MIT "MAS.863/4.140/6.9020 How To Make (almost) Anything"
- **Teaching Assistant** (2023 Fall) - MIT "MAS.863/4.140/6.9020 How To Make (almost) Anything"
- **Head Teaching Assistant** (2022 Spring) - MIT "MAS.836 Sensing Technologies for Interact Environments"
